SYNEXIS
WIRELESS INFORMATION SYSTEM

VERSATILE SYNEXIS

Synexis is a wireless system designed for guided tours, assistive listening, interpretation applications and can also be used as command system. The system is very versatile and suitable for many applications.

When transmitting information, the spoken word is essential whether in a small or large group of people. With Synexis you can be sure that it will perform perfectly. The system features properties such as an optimum speech intelligibility and easy handling for a variety of applications. The extensive product range and many product features meet any requirement. This includes the practical transport and charging case or an individual charging and storage cabinet. Synexis can be used at any time.

ADVANTAGES AT A GLANCE:

- Operation without registration in the free UHF frequency range 863-865 MHz (CEPT/EU countries)
- Latest UHF radio technology (863-865 MHz) for flexible usage indoors or outdoors
- Suitable for many applications
- Battery or rechargeable battery operated, using standard AA batteries
- Rechargeable batteries provide long operating time with quick charging
- Extensive product range and accessories
- High speech intelligibility due to noise-cancelling microphones
- Multifunction operation allows simultaneous use for several groups

TRANSMITTING

Thrill your audience. For transmitting, there is a handheld microphone, a belt-pack transmitter with microphone or the stationary transmitter. The microphone with a soft-touch surface provides an intuitive operation and perfect speech intelligibility. Even with wind noise there is no need to raise your voice. If you want to speak with your hands to explain exhibits, for example, neck-worn or clip-on microphones combined with a pocket transmitter provide optimal freedom of movement. The handheld and belt-pack transmitters can be operated using either rechargeable batteries or batteries in standard AA format.

COMFORTABLE
Use the belt clip or a lanyard to wear the belt-pack transmitter.

MICROPHONE CONNECTION
Use a microphone of your choice that meets your requirements.

On/off switch

MUTE FUNCTION
In order to answer individual questions, you can mute the microphone.

AUDIO INPUT
For connecting a sound source or a second transmitter.

Charging contacts

Charging contacts

MULTIFUNCTION DISPLAY
From all perspectives the OLED display clearly shows the battery status, channel selection, frequency and mute function or with the belt-pack transmitter the channel lock function.

On/off switch, Set button

Channel selection

BATTERY OPERATION
The device can be used with standard batteries or rechargeable batteries. The NiMH rechargeable batteries included in delivery provide an operating time of a length comparable to 12-hour batteries.

CONTROL BUTTON (MUTE BUTTON)

You can also mute the microphone to answer supplementary questions. Individual settings of the mute function ensure a reliable handling.

DISPLAY OF BATTERY OR CHARGING STATUS

Different colours show whether the microphone is activated or muted, and show the charge status when charging the microphone.

RECEIVING

The robust receiver can be operated intuitively and provides optimal comfort for wearing whether using a lanyard or belt clip. The receiver and a choice of available headphones are worn separately. This means additional comfort for the audience, especially with the headphones which are easy to clean. The receiver can be powered by rechargeable batteries or normal batteries.

TURN ON AND CONTROL THE VOLUME

Use one button to turn the device on/off and control the volume.

DIFFERENT POSSIBILITIES TO WEAR

Wear the receiver with the supplied lanyard or belt clip. All controls are easily accessible.

BATTERY OPERATION

The device can be used with standard batteries or rechargeable batteries. The NiMH rechargeable batteries included in delivery provide an operating time of a length comparable to 20-hour batteries.

Channel selection

HEADPHONE CONNECTION

You can connect appropriate headphones and an induction loop for hearing aids.

DISPLAY OF RECEIVING AND CHARGING STATE

Various colours show whether reception is available and indicate the charge status when charging.

MULTIFUNCTION DISPLAY

The modern OLED display shows clearly the readable channel, battery status, frequency and channel lock function from all perspectives.

TRANSPORT AND CHARGING

For the Synexis components there are various possibilities for charging and transport available such as a trolley case or a compact case for mobile use. A cabinet, which can be equipped with several chargers, is the perfect solution for larger systems with stationary use.

Fold-up, removable cover

NUMEROUS CHARGING COMPARTMENTS

Charge a maximum of 30 beltpack receivers / transmitters for battery-powered operation simultaneously. Within a short time they are ready for use due to an intelligent charging electronics.

CHARGING COMPARTMENT FOR MICROPHONE

Optional charging compartment for one handheld transmitter.

Integrated power supply and active fan.

WHEN YOU ARE ON THE MOVE

Lockable and with practical shoulder strap.

Compartment for accessories

NUMEROUS CHARGING UNITS

19" charging devices and the tabletop charger are also available for recharging the components.

OPTIMAL STORAGE SPACE

In this compartment you will find enough storage space for a number of headphones.

Power supply unit
and charging

MICROPHONE'S CHARGING COMPARTMENT

If your microphone is powered by rechargeable batteries, you can recharge it in the appropriate compartment of the trolley.

NUMEROUS CHARGING COMPARTMENTS

Charge up to 20 beltpack receivers and transmitters and one handheld microphone simultaneously for the rechargeable battery powered operation. The devices are ready for use within a short period of time.

TRANSPORT

The components can also be powered by standard batteries. There are different cases available for transport and storage.

MODULAR TRANSPORT CASE

The modular transport case with two units can be flexibly equipped. The receiver unit can accommodate 12 receivers and 12 headphones or 24 receivers. The other unit can store different transmitters, microphones, earphones and accessories. The receiver can also be purchased individually as an extension and with its practical clip lock it can be quickly and easily attached to the case to form one unit. More cases are available on request.

APPLICATIONS

TOUR GROUPS

By using the Synexis system – for example in guided tours through factories or museums – each tour becomes an individual event whether the ambient noise is high or low. Multifunction operation allows simultaneous use for several groups.

LANGUAGE INTERPRETATION

The Synexis system is also used for whispered interpretation applications or in combination with other interpretation systems. In mega events with interpreters, a huge area can be covered with one antenna which reduces the cost for installation compared to infrared technology. Furthermore, the system is more user-friendly, as there is no need of visual contact to the antenna.

ASSISTIVE LISTENING

In public buildings such as schools, churches, cinemas, theatres or stadiums seating for those with impaired hearing are compulsory. With the Synexis system, the speech is acoustically boosted. Instead of a headphone, induction loops can also be used. Sit in any event and understand every word.

Induction neckloop for hearing aids

GUIDED TOURS THROUGH TOWNS AND OUTSIDE

During outdoor tours, visitors often move away from the group; furthermore the communication is made difficult by traffic and wind noise. The latest UHF technology allows guided tours the ability to move in and out doors.

BUS TRIPS, GUIDED TOURS AND SHORE EXCURSIONS

As a travel company, Synexis offers you maximum flexibility. The system can be used wherever you wish to transmit information – be it on a bus, during the subsequent guided city tour or on shore excursions from a cruise ship. The tour guide system is the ideal travel companion, wherever you need support.

MULTILINGUAL SIGHTSEEING

As an example, in boat trips or sight-seeing tours, information is often provided in several languages by media. The languages are transmitted by the Synexis system and the visitor simply selects his or her language.

TEACHING OF TRAINING CONTENT

Synexis is the perfect companion whenever training content needs to be transmitted. Whether rowing, at dog training grounds, on road traffic practice areas or when instructing close to large, noisy machines – with Synexis the trainer's instructions can be understood over long distances, allowing exercises to be performed correctly.

LIVE COMMENTARIES FOR VISUALLY IMPAIRED PEOPLE

Special live commentaries allow visually impaired people to take part, for example, in sporting events within the atmosphere in the stadium.

COMMAND SYSTEM FOR HORSE RIDING LESSONS

Concentrate yourself during your horse riding lessons – with the help of Synexis. The system assists the trainer to address all relevant advices in agreeable voice with perfect intelligibility to you, even in long distances up to 100 meters. Irritations due to misunderstandings are a thing of the past.
