UNITE THE PEOPLE

COMMUNICATION IS THE KEY TO THE WORLD

Unite's utmost aim is to help us understand each other better. This applies equally to the acoustic improvement of speech intelligibility, ease of use and range of applications. Unite is the digital wireless communication system from Televic that allows people to communicate and interact with each other. This digital platform opens up whole new possibilities for improved dialogue between people, regardless of when, where and how they wish to communicate.

Unite connects people – even over larger distances, language barriers or with sensory disabilities.

We are certain that by improving communication between people, we will be able to improve many people's quality of life too.

FUTURE-PROOF

The future-proof, wireless transmission platform in DECT standard means the system can be used without certification and licence fees. You need not worry about frequencies as the system itself automatically controls robust and encrypted transmission. This allows up to 32 groups to be integrated in parallel, and its wide operating range and long operating time offer completely stable transmission conditions.

SPEAK

LISTEN

INTERACT

A black and white photograph of a woman in profile, wearing a headset with a microphone. She is holding a small, black, handheld audio device in her right hand. The device has several buttons and a speaker. The background is a blurred indoor setting.

MULTI-WAY-COMMUNICATION – DIALOGUE INSTEAD OF MONOLOGUE

Unite transmits audio signals bi-directionally. The receivers' talkback function makes group dialogue possible, allowing for interactive tours and events.

Other guides or speakers can also actively be brought in. Unite allows up to three people to speak simultaneously, with any number of listeners. The guide with the main device can decide whether word contributions from his group are audible for him only, or for all participants. For the purpose of maintaining order among the questioners, you can also specify whether they are activated or not. If you want to integrate external devices bi-directionally, you can do so via existing digital, analogue and wireless audio interfaces.

FEATURES

Fee-free DECT standard with no registration required

Automatic frequency management

Versatile use for the widest range of applications

Intelligent battery management for long operating times

DSP features for perfect speech intelligibility

Bi-directional transmission

3 people can speak simultaneously

32* parallel groups possible; theoretically with as many participants as you like

High operating range

Tap-proof thanks to AES-256 bit encryption

Interfaces for audio (USB, analogue, Bluetooth, Dante)

Can be used for assistive listening

* up to 14 for North America and Japan frequency spectrum

MASTER and/or SUB-MASTER DEVICES

Bodypack Transmitter

71.98.4010 Unite TP (EU)
71.98.4011 Unite TP (NA)
